

National Myeloma Day 2017

Striving for a personalised approach to treatment

This year, an estimated 1800+ Australians will be diagnosed with myeloma – a cancer of plasma cells, the white blood cell that creates antibodies.

Myeloma: Striving for a personalised approach to treatment

Over the past decade, advances in the understanding and management of myeloma have been impressive. The development of new agents, available through clinical trials, has provided expanding treatment options for people with myeloma and resulted in much improved outcomes. Myeloma research is having an impact on the way forward, as we work now towards a more personalised approach in managing myeloma.

Please join us at this National Myeloma Day education and support event for people living with myeloma, their family and friends.

Date: Saturday 13 MAY, 2017

Time: 9.30am – 2.45pm

Venue: Rydges Melbourne
186 Exhibition Street, Melbourne
